

Summer Bird Feeders Mobile

Material Needed

- Cardboard tubes
- Paint
- Wrapping Paper or Coloured Paper
- Thread and old Buttons
- Plate
- A stick.

Paint the cardboard tubes in different colours and leave to dry, then cut a small opening in the central area as a door, leaving door open wide.

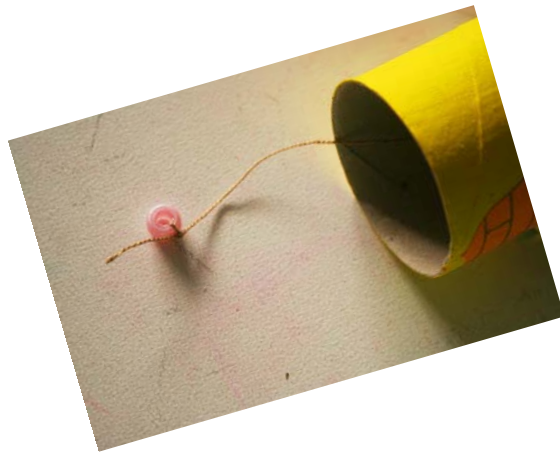

Using a plate as a template, cut out the wrapping paper in circles. Then cut each circle in half.

Wrap each cone-shaped semicircle, and paste together, just leaving a small opening at the top to pass the thread through.

Next glue the roofs on the birdhouses.

Pass a piece of thread inside the house to come out of the hole left at the apex of the conical roof. At the end of the string tie on a button.

Tie the other end of the string to a stick that will be the mobile support. Hang them at different heights and there you have your friendly **mobile birdhouses** .
